

CC / License Statement

Campus Hazard Detection Mobile App Using YOLO Ensemble and Meta-Classifer
CSC4602 Machine Learning Group Final Project | 28 June 2026

Copyright (c) 2026 Liu Enzhuo, Li Hongpu, Wang Qihua, and He Jun. This statement applies to the project repository, technical report, software, trained-model artifacts, and supporting materials, subject to the exclusions below.

1. Original Report and Documentation

Unless otherwise identified, the original written report and project documentation created by the group are licensed under the **Creative Commons Attribution-NonCommercial 4.0 International License (CC BY-NC 4.0)**. Users may share and adapt those original materials for non-commercial purposes, provided that appropriate credit is given, a link to the license is supplied, and modifications are indicated. License: <https://creativecommons.org/licenses/by-nc/4.0/>

2. Source Code

The source code is submitted for CSC4602 academic assessment, educational review, demonstration, and reproducibility. Creative Commons licensing does not apply to the software code. Unless a source file or dependency states a separate license, no permission is granted for commercial redistribution, resale, production deployment, or incorporation into a commercial product without written permission from the authors.

3. Datasets and Annotations

Public datasets and externally sourced images remain subject to their original licenses, attribution requirements, and terms of use. This project does not relicense third-party datasets. The group's annotated datasets are not made public in this repository; they are shared privately with the instructor through Google Drive solely for assessment. They must not be redistributed without permission and confirmation that the underlying source licenses allow redistribution.

4. Models, Weights, and Generated Outputs

YOLO weights, the meta-classifier, evaluation outputs, and example detections are provided for academic evaluation and demonstration. Their permitted reuse may also depend on the licenses of the training data, frameworks, and pretrained components. Users are responsible for checking those terms before reuse or deployment.

5. Third-Party Software and Assets

Flutter, FastAPI, Ultralytics YOLO, scikit-learn, Gemini services, Python packages, icons, images, and all other third-party components retain their respective licenses and terms. Nothing in this statement overrides those rights or grants ownership of third-party materials.

6. Privacy, Safety, and Responsible Use

Images or evidence that identify individuals, vehicles, or private locations should not be published without appropriate consent. Detection results and LLM-generated recommendations are advisory outputs for campus-safety demonstration and must not replace professional inspection, institutional procedures, or emergency services.

7. Disclaimer

The project is provided "as is", without warranties of accuracy, fitness for a particular purpose, or non-infringement. The authors are not liable for decisions, losses, injuries, or damages arising from use of the software, models, datasets, recommendations, or documentation.
